Water cysle **دورة المياه**

Did you know?

The water cycle is also known as the "hydrologic cycle"

Earth has been recycling water for over 4 billion yearsl

Do plants sweat? Well, sort of…. People perspire (sweat) and plants transpire.

Transpiration is the process by which plants lose water out of their leaves.

So how can we understand this magical process ealled the water cycle?

There are four main parts to the water cycle: evaporation, convection, precipitation and collection.
